Sterimar Congestion Relief Kids

Uses

Rapidly decongests the nose and washes away even thick mucus. Relieves the symptoms of colds and helps reduce the risk of secondary infections.

Dosage

Prime the spray by briefly pressing the nozzle. Children 3 months to 3 years: lay the child down on his/her side or sitting up with baby's head tilted to one side. Two years and over: keep the head upright. Gently insert the nozzle into the nostril and press for approximately 2 seconds. Let any excess solution run out before wiping the nose. Repeat in the other nostril. Recommended for use prior to sleep and before (breast) feeding. Use 2-6 times a day until the nose is no longer blocked or as long as a doctor recommends.

Format and Ingredients

Nasal spray containing in 100ml:
100% natural sea water based solution (hypertonic solution enriched with copper),
